

Trident Reference Series

This is the original studio reference tape of the unmixed album that features lots of Bowie that was eventually mixed out. Personally I think it sucks! but the quality is 10/10 and if you are a Bowie collector then it's a must have. 48k/16bit Stereo

working copy tape - this rough mix features bowie on backing vocals and can also be heard instructing the band on chord sequences ect .. the album was eventually released in 1995 with 90% of bowie removed from the final mixes.
